ATM Card Skimming and PIN capturing Awareness Guide

**Prepared by Simon Grubisic-
Protective Security Advisor**

What is ATM Card Skimming and PIN Capturing?

- **ATM Card Skimming** is a method used by criminals to capture data from the magnetic stripe on the back of an ATM card.
- The devices used are smaller than a deck of cards and are often fastened in close proximity to or over the top of an ATM's factory-installed card reader.
- **Pin Capturing** refers to a method of strategically attaching cameras and various other imaging devices to ATMs; in order to fraudulently capture the ATM user's PIN.

Where to spot a card skimming or pin capturing device on an ATM?

Region 1. Light diffuser area

Region 2. Speaker area

Region 3. ATM side fascia

What do skimming devices look like?

Can you tell if this ATM machine has a skimming device fitted to the card reader?

■ ■ ■

What do skimming devices look like?

Spot the difference...Can you tell now?

- Top photo shows an unadulterated ATM fascia. The flashing lead through entry indicator is easily observed.

Note: Most skim devices when fitted will obscure the flashing entry indicator this should be a vital clue as to any suspect tampering.

Spot the difference in the next photo.

- A skim device has been placed in or near the card reader slot. Although the device has been given the appearance of being a standard part of the terminal it is in fact an additional fitted piece & clearly is different from the above photo.

Note: No flashing lead through light can be seen.

The shape of the bezel is clearly different.

What do PIN capturing devices look like?

This is an example of what an ATM keyboard skimmer plate can look like.

Facts on ATM skimming attacks

- **Criminals tend to attach skimming devices either late at night or early in the morning, and during periods of low traffic.**
- **Skimming devices are usually attached for a few hours only.**
- **Criminals install equipment on at least 2 regions of an ATM to steal both the ATM card number and the PIN.**
- **Criminals then sit nearby receiving the information transmitted wirelessly via the devices (installed on the ATM).**

What can you do to mitigate the risk of a skimming attack?

- **Get to know the appearance of your ATM.**
- **Inspect the front of the ATM for unusual or non standard appearance. Scratches, marks, adhesive or tape residues could be indicators of tampering. The inspection should be part of your morning external check and afternoon closing procedure. Where possible, inspections should also be conducted during trading hours.**
- **Familiarise yourself with the look and feel of your ATM fascia. Particularly pay attention to all of the touch and action points. (e.g. keypad, customer card entry slot, lighting diffusers)**

What can you do to mitigate the risk of a skimming attack?

- Inspect all areas of the fascia. Look at card reader entry slot & regions immediately above the consumer display and keyboard area for anything unusual.
- Report any unusual appearance immediately through to the **Group Emergency Hotline on 1800 643 410 and keep watch over any suspect device until the Police or CBA Security arrive.**

 **By being vigilant you can play a part in reducing the risk of a skim attack!**
